

- *Positive direct sprocket drive.*
- *Ideal for a huge range of applications.*
- *Standard belt materials are polypropylene, nylon and acetal.*
- *Belts available as flat-top, perforated, slotted, flighted or gripface.*

TRU-TRAK PVC MODULAR BELT CONVEYOR

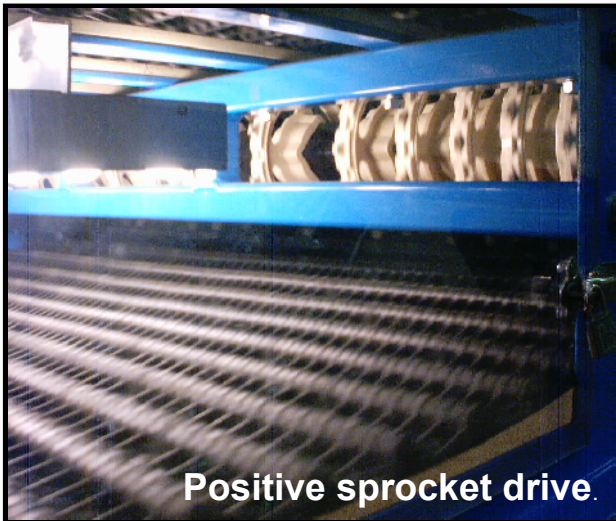

Unique positive drive belt conveyors..

The unique modular belt configuration offers a wide selection of sizes. With a choice of many different materials this versatile conveyor becomes ideally suited for a huge range of applications in many industries. Used in many arduous environments from sub zero conditions up to temperatures over 100 degrees celsius and is especially useful for heavy side loading or off loading anywhere along it's length.

The carefully designed direct sprocket drive ensures no tracking problems, whatever the belt width or length, it also eliminates any belt slippage and because it allows the belt to run loose dramatically reduces load on the drive shaft bearings. This in turn reduces power requirements. With the all round low friction properties of these conveyors the outstanding feature must be long expectancy with minimal maintenance.

Owens Conveyor Company.

Positive sprocket drive.

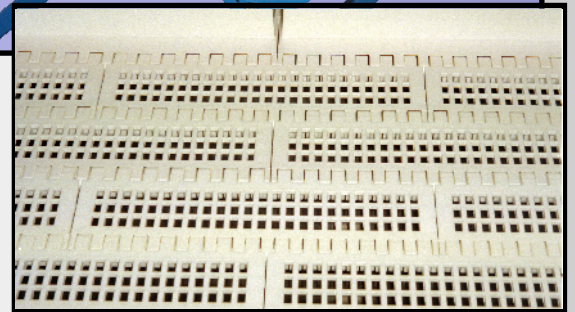

- Conveyor width up to 2000mm wide,
- Robust solid welded construction in stainless steel or mild steel powder coated.
- Damaged belts can easily have individual slats replaced.

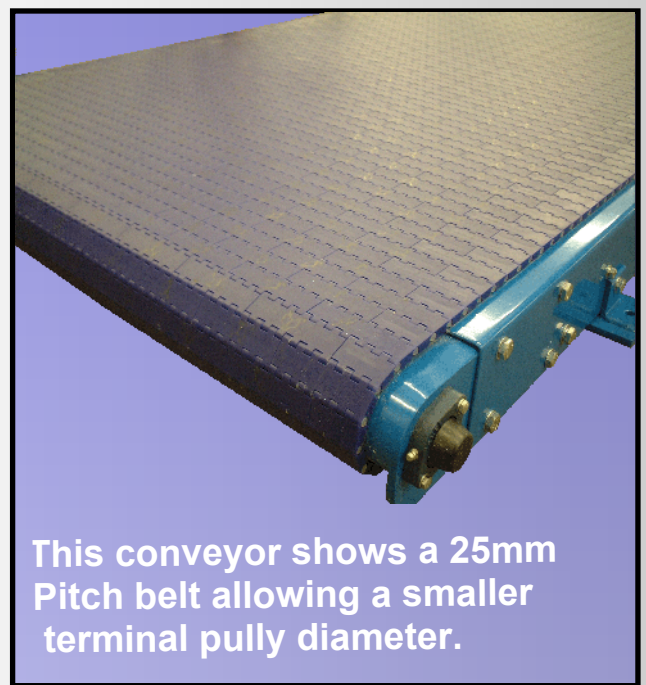

Flighted PVC modular parts conveyor.

Short wide conveyors with no tracking problems.

- Perforated belt for wash down applications.

This conveyor shows a 25mm Pitch belt allowing a smaller terminal pulley diameter.
